Adarsh Gupta

Flutter Developer

+91 9137425943 | dev.adarshgupta@gmail.com | linkedin.com/in/adarsh-gupta | github.com/flutterbyadarsh

Objective

Flutter and Dart mobile developer seeking a **Flutter Developer Internship** to apply hands-on project experience in building cross-platform apps. Skilled in integrating REST APIs, Firebase, and local storage, with a solid grounding in Data Structures, DBMS, and OOP fundamentals. Eager to learn from a professional team and contribute to real-world mobile products.

Education

Noida International University **Expected May 2027**

B.Tech in Computer Science and Engineering

- Relevant Coursework: Data Structures and Algorithms, DBMS, Object-Oriented Programming, Operating Systems, Computer Networks

Skills

- **Languages:** Dart (Primary), C++, Java, SQL
- **Mobile Development:** Flutter, Widget Lifecycle, Custom UI, Responsive Layouts, Material Design 3
- **State Management:** Provider, setState, Riverpod (Learning)
- **Backend and Storage:** Firebase (Auth, Firestore, Storage), REST APIs, SharedPreferences, Hive, SQLite
- **Core CS:** Data Structures and Algorithms, OOP Concepts, DBMS (ER Modeling, Normalization)
- **Tools:** Android Studio, VS Code, Git, GitHub

Projects

Task and Todo Manager App **Currently Working**

Flutter, Firebase Auth, Local Notifications, Dart – github.com/flutterbyadarsh/Todo_app

- Building a clutter-free task management app with priority-based color tags, category filters, and quick search.
- Designing user flows for task creation, deadline scheduling, and progress tracking to minimize user friction.
- Integrating Firebase authentication for secure sign-in and local notifications for timely reminder alerts.

Weather Forecast App **2026**

Flutter, Provider, Geolocator, Weather API – github.com/flutterbyadarsh/weather_update_v2

- Built a real-time weather app fetching live location data via Geolocator and displaying temperature, humidity, wind speed, and feels-like temperature.
- Implemented hourly and 5-day forecast views with a clean, scrollable interface backed by a weather API.
- Managed application state using Provider for efficient data fetching and UI updates.

User Profile Management App **2026**

Flutter, SharedPreferences – github.com/flutterbyadarsh/profile_page

- Implemented user profile editing (name, bio, dynamic avatar picking) with smooth state updates.
- Integrated SharedPreferences for local persistent caching so profile data persists across app restarts.

E-Commerce Shoes App (Clone) **2026**

Flutter, Provider – github.com/flutterbyadarsh/Flutter_Shoes_App

- Built an e-commerce app UI with category navigation, product detail views, and interactive carts.
- Implemented advanced Flutter layouts using Sliver widgets and responsive design for consistent cross-screen display.
- Managed application state using Provider for efficient UI re-renders and clean code separation.

Authentication and Onboarding Flow **2026**

Flutter, Firebase Auth, Firestore – github.com/flutterbyadarsh/authentication_system

- Built a secure onboarding flow supporting Email/Password sign-up and email verification.
- Designed inline validation and real-time error messaging to guide users through authentication steps.

Achievements and Continuous Learning

- **GitHub:** Maintain active repositories at github.com/flutterbyadarsh with clean code architecture and structured documentation.
- **Problem Solving:** Practicing Data Structures and Algorithms on LeetCode and GeeksforGeeks to strengthen core logic.
- **Currently Exploring:** UI/UX design principles and Riverpod for scalable state management in Flutter apps.
